Ren Chenglong, Shan Xizheng, Wang Entong, Cheng Yuanxing, Wang Ning. [Acupuncture combined with repositioning for benign paroxysmal positional vertigo (BPPV) : a systematic review and meta-analysis]. Beijing Medical Journal. 2018;(2):. [26733].

Objective	To do a systematic review and meta-analysis for acupuncture combined with repositioning for treatment of benign paroxysmal positional vertigo (BPPV).
Methods	CNKI, VIP, Wan-Fang and Pubmed databases were searched for the randomized controlled trials (RCTs) about acupuncture combined with repositioning for BPPV. The Consolidated Standards of Reporting (CONSORT statement) and international standards (The STRICTA) report were used to evaluate the quality of reports about acupuncture combined with repositioning for BPPV.
Results	Fourteen eligible studies were included. Compared with control, the efficiency was significantly improved and the TCM symptom score was reduced significantly in patients treated by acupuncture combined with repositioning for BPPV.
Conclusion	Acupuncture combined with repositioning for BPPV has deficient clinical efficiency with good safety in treatment of BPPV.
